```

σ

```
NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.
```

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

MAPPING INFORMATION:
Mapping information for this clone was provided by Dr. John D.
McPherson, Department of Genetics, Washington University, St. Louis
MO. For additional information about the map position of this
sequence, see http://genome.wustl.edu/gsc

SOURCE INFORMATION:
The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, B. Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org

of at NEIGHBORING SEQUENCE INFORMATION: The clone sequenced to the right is RP11-725J3. Actual start this clone is at base position 1 of RP11-67L14; actual end is base position 154214 of RP11-67L14.

overlap between There are polymorphic base differences in the RP11-67L14 and RP11-725J3. Location/Qualifiers 1. .154214

Novel methods and nucleic acids for diagnosing and treating disorders associated with high levels of interleukin lbeta, especially inflammatory diseases.

```
The present sequence is that of human interleukin-1 beta (IL-IB) allele 2 (+6912), which is a form of the IL-IB gene that contains guanine at position +6912; IL-IB allele 1 (+6912) has cytosine at this position (see position +6912; IL-IB allele 1 (+6912) has cytosine at this position (see allele at marker +6912 of the IL-IB gene. The C to G transition occurs within the 3' untranslated region of the IL-IB gene and results in an increased level of IL-IB protein. Individuals homozygous for the IL-IB allele 2 (+6912) accumulate approximately 4 times more immunoreactive IL-IB protein than homozygotes for IL-IB allele 1 (+6912). Methods and kits are provided for detecting IL-IB allele 2 (+6912), or an allele in linkage disequilibrium with an IL-IB allele 2 (+6912), and thereby contermining a patient's susceptibility to developing inflammatory contermining a patient's susceptibility to developing inflammatory contermining a patient's alopecia areata, draves disease, systemic lupus in diabetes mellitus, alopecia areata, draves disease, systemic lupus cretinopathy, periodontal disease, juvenile chronic arthritis, psoriasis, cretinopathy, periodontal disease, juvenile chronic arthritis, claimed). Identification of the IL-IB allele 2 (+6912) and its involvement in IL-IB overproduction also eables screening assays for involvement in IL-IB allele 2 (+6912). Transgenic animals are also claimed, and can be used to treat conditions associated with IL-IB allele 2 (+6912). Transgenic animals are also claimed, and can be used to candidate therapeutics
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8764
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   420
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               540

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes genotyping a nucleic acid sample from a subject to determine at least one allele of an interleukin-1 (IL-1) proinflammatory haplotype. A method has also bee described for determining a subject's susceptibility to developing chronic obstructive airway disease (COAD) or for predicting the rapidity or ultimate progression of a COAD in the subject by: (a) obtaining a nucleic acid sample from the subject; and (b) detecting at least one allele of an IL-1
                                                                                              780
                                                                                                                                                    840
                                                                                                                                                                                                         900
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Genotyping nucleic acid samples for interleukin-1 (IL-1) proinflammatory haplotype alleles, useful for predicting susceptibility to developing chronic obstructive airway disease.

proinflammatory haplotype in the sample, where detection of at least one of these alleles indicates that the patient has an increased susceptibility to developing COAD. The method is useful for determining the susceptibility of subjects to developing chronic obstructive airway disease or for predicting the rapidity or ultimate progression of chronic obstructive airway disease (COAD). COAD or ultimate progression of chronic bronchitis. The method provides for early identification of chronic obstructive airway disease (COAD), facilitating administration of appropriate treatment at the earliest stage, thereby increasing the probability of a positive outcome. The present sequence represents the human IL-1B gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a method for determining whether a subject has or is predisposed to developing a disease or condition that is associated with an IL-1 inflammatory haplotype. The method involves detecting at least one allele of the haplotype, where the presence of the allele indicates that the subject is predisposed to the development or has the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New method of determining a patient's susceptibility to inflammatory disorders - by detecting the presence of an IL-1 (44112332) haplotype, useful in designing treatment strategies that modulate the activity of proteins produced by the IL-1 gene cluster.

disease or condition. The invention allows the determination of an individual's likelihood for developing a particular disease or condition associated with interleukin 1 (IL-1) polymorphisms without necessarily determining or characterising the causative genetic variation. Diseases such as inflammatory disease e.g. Systemic Inflammatory Response (SIRS), Alzheimer's disease, arthritis e.g. acute joint inflammatory livense control of arways disease, arthritis e.g. acute joint inflammatory juvenile control arthritis; arthritis arthridac cell disfunction e.g. aportic smooth architis; cardiowypathy and cardiac cell disfunction e.g. aortic smooth inflammators of inflammatory bowel disease, ulcerative colitis; HIV inflammatory bowel disease, ulcerative colitis; HIV inflammatory powel disease, ulcerative colitis; glabetic retinopathy, coronary artery lesions; nephropathse e.g. diabetic retinopathy, coronary corphangenticis; pulmonary diseases e.g. diabetic retinopathy, careoporosis e.g. diabetic retinopathy, careoporosis e.g. chronic lymphocytic thyroditis; chronic simusitis; thyroditis e.g. chronic lymphocytic thyroditis; chronic simusitis; thyroditis e.g. chronic prostatitis, chronic pelvic pain correcters e.g. alopecia areata, Graves disease; chronic fatigue syndrome; obesity; inflectious diseases e.g. Leprosy, inflectious diseases e.g. cerebral trauma, mycoardial disfunction; e.g. a more complasias e.g breast cancer, Hodgkin's disease; bromonal regulation e.g. fertility, septicaemia; organ transplants. This allows for a more customised approach to perventing the onset or progression of the disease customised approach to perventing the onset or progression of the disease or condition, e.g. a clinician can more effectively prescribe a therapy that will address the molecular basis of the disease or condition. The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, cytostatic and analgesic activities. The compositions are impaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating e.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The reduction of the adenosine content of the ONs reduces side effects. The A-conclaining ONs break down with the release of deoxyadenosine which activates adenosine receptors causing bronchoconstriction and inflammation. AAA32313 to AAA33312 represent the nucleotide sequences given in the sequences differ invention, which correspond to SEQ ID NO:1 to 2815, and then the last 185 sequences given in the disclosure of the present invention. N.B. Sequences given in the disclosure of the present invention do not match lighting that corresponding SEQ ID NO: sequences given in the sequence

                                    The present sequence is that of human interleukin-1 beta (IL-1B) allele 1 (+6912), which is a form of the IL-1B gene that contains cytosine at the sosition +6912; IL-1B allele 2 (+6912) has guanine at this position (see passition +6912; IL-1B allele 2 (+6912) and the indentification of this novel allele at marker +6912 of the IL-1B gene. The C to G transition occurs cwithin the 3' untranslated region of the IL-1B gene and results in an increased level of IL-1B protein. Individuals homozygous for the IL-1B contained approximately 4 times more immunoreactive IL-1B protein than homozygotes for IL-1B allele 2 (+6912). Methods and kits are provided for detecting IL-1B allele 2 (+6912), or an allele in linkage disequilibrium with an IL-1B allele 2 (+6912), and thereby disorders, especially coronary artery disease, systemic lupus of cetermining a patient's susceptibility to developing inflammatory disorders, especially coronary artery disease, systemic lupus of cetermining a patient's alopedia areata, "uvanile chronic arthritis; peoriasis, cretinopathy, periodontal disease, juvanile chronic arthritis; peoriasis, cretinopathy, periodontal disease, juvanile chronic arthritis; claimed). Identification of the IL-1B allele 2 (+6912) and its involvement in IL-1B untagonists at can be used to treat conditions associated with IL-1B allele 2 (+6912). Transgenic animals are also claimed, and can be used to identify IL-1B agonists and antagonists or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8824
                                                                                                                                                                                                                                                                                                                                                                                                                     8404
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8524

The present invanton describes low adenosate (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base. (I) can have respiratory, bronchodilator, antinilalmandory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors, immunoslobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adhesion molecules and their receptors, cytokine and chemokine receptors, adenosine receptors, bradykinin receptors, central nervous system (CNS) and paripheral nervous and non-nervous system creeptors, defensins, growth factors, vasocative peptides and receptors, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders and/or pronchoonstriction) and/or lung inflammation, allergies syndrome condition selected from pulmonary vasoconstriction; inflammation, caufactant hypoproduction which are associated with a disease or condition selected from pulmonary vasoconstriction; inflammation, cystic fibrosis (CP), allergic rhinitis (AR), pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), pulmonary transplantation rejection, pulmonary undonery transplantation rejection, pulmonary undonery transplantation rejection, pulmonary undonery transplantation of pulmonary pulmonary transplantation of pulmonary pulmonary transplantation of pulmonary pulmonary
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8464
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    8584

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9064
                                                            The present sequence is provided in a specification relating to a method for determining whether a subject has or is predisposed to develop an interstitial lung disease. The method involves detecting an interleukin-1 receptor antagonist (IL-IRN) (+2018) allele 2, a tumour necrosis alpha (INF-A) (-308) allele 2, or an allele in linkage disequilibrium with either of these two alleles. The method may be used to determine whether a subject has or is predisposed to develop an interstitial pneumonia or a pulmonary fibrosis and other disorders such as rheumatoid arthritis, systemic lupus erythmatosis, Sjogren's syndrome, systemic sclerosis, dermatomyocitis. The method is also used for identifying molecules which can be used as therapeutics for treating interstitial lung disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          300

The method comprises detecting a restenosis associated allele (RAA) in a nucleic acid sample from the subject, where detection of the RAA indicates that the subject has or is predisposed to the development of a restenosis. The restenosis associated allelic pattern permits the diagnosis of occlusive cardiovascular disorder. The diagnosis allows the most suitable treatment methods for restenosis to be used e.g. selecting therapies for initial vascular stenosis most likely to avoid subsequent stenoses. The detection methods identify restenosis therapeutics, agonists and antagonists, (proteins, peptides, e.g. anti-sense, ribozyme and triplex nucleic acids) which are used to treat restenosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              sample

                                                                                                                                                                                                                                                                                                                                                                               ģ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a method for evaluating and treating risk of unexplained recurrent pregnancy loss (URPL) in a subject suspected of having immunologic reproductive failure. The method involves testing a sample obtained from the subject for the presence of a variant in the human interleukin-lbeta (IL-lbeta) promoter region, and/or a variant in the CD46 gene intron 1 region, where the presence of the variant, indicates an elevated risk of developing recurrent pregnancy loss. The present sequence is human prointerleukin-1 beta (IL-1 beta) gene
                                                                                          Unexplained recurrent pregnancy loss; immunologic reproductive failure;
URPL; prointerleukin-1beta; IL-1beta; human; ds.
                                                                                                                                                                                                                                                                                                                                                                             Evaluating risk of unexplained recurrent pregnancy loss in a subject, testing presence of a variant in interleukin-1 beta promoter region and/or in CD46 gene intron 1 region in a sample obtained from the subject.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CAACTGCCTGCCTTAGGGTAGTGCTAAGAGGATCTCCTGTCCATCAGCCAGGACGTCAG

The invention relates to a novel pharmaceutical composition, which has a first active agent comprising an oligonucleotide antisense to the initiation codon, coding region, 5' or 3' end genomic flanking regions, 5' and 3' intron-exon junctions, or regions within 2-10 nucleotides of junctions of genes encoding a polypeptide associated with lung and/or nasal airway dysfunction and a second active agent comprising an antiinflammatory steroid and ubiquinone. A composition of the invention has antiinflammatory steroid and ubiquinone. A composition of the invention and antiinflammatory, antiallergic, antiasthmatic, hypotensive, immunosuppressive, and cytostatic activity. The composition may have a use in antisense gene therapy. The composition is useful for treating or preventing a respiratory, lung or malignant disease or condition, a septiatory steroid in a subject, for reducing or depleting levels of of, or reducing bronchodilation, increasing levels of adenosine receptor, producing bronchodilation, increasing levels of ubiquinone or lung surfactant in a subject's tissue, or treating bronchoconstriction, lung inflammation, lung allergies, or a respiratory disease or condition. Note: The sequence data for this patent is not represented in the printed specification, but was obtained in electronic format directly from WIPO at ttp.wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8404
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              8464
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   8524
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         8584

                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8884
reagent comprising an interactive sensor pair. The detection reagent is useful for monitoring molecular assembly events to permit the dissection of genetic and non-genetic influences on a particular biological activity. The method is useful for linking genetic variations to molecular and physiological events, drug screening, diagnostics, therapy selection and dosing, patient monitoring or environmental safety. The interactive sensor pairs may be used to screen for and identify novel agonists and antagonists or other molecules that modulate a biological activity. The method is also useful for selecting an appropriate targeted therapeutic for a subject having an infection, including viral, bacterial or fungal infection. It is also used in gene therapy. The present sequence is human interleukin-1 (IL-1) allelic gene. This sequence is used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 240

```

The invention relates to a novel method for determining a subject's susceptibility to the early onset or progression of an ageing-related condition (EOA). The novel method comprises assessing the subject's genotype with respect to at least one allele of an interleukin (IL)-1 pattern 1, pattern 2 and/or pattern 3 (the presence or absence of at least 1 allele provides information about the subject's susceptibility to an early onset or progression of an ageing-related condition). The method is useful for determining or predicting a subject's susceptibility to the carly onset or progression of an ageing-related condition (e.g. osteoporosis, osteoarthritis, wrinkled skin, or age-related cancer) and for determining an ageing-related phenotype. The method may be a customised therapy based on the individual's genetic profile, to tailor a recommended lifestyle, including changes in exercise and diet, and to recommend nutraceuticals that are predicted to benefit a subject having a particular IL-1 genotype and EOA predisposition. This polynucleotide is sequence relating to the invention

The present sequence is that of the interleukin-1 beta (IL-1B) gene
including the upstream promoter region. A novel function-altering
polymorphism has been discovered at position -3737 in the distal upstream
colored and including the distal upstream
colored for diagnosing an increased likelihood of developing an
increased IL-1B expression and is associated with inflammatory disease. A
claimed method of diagnosing an increased likelihood of developing an
inflammatory disease or condition associated with increased interleukin
colored in subject involves determining the identity of the -3737 IL
B allele as a type 1 (C) or type 2 (T) promoter sequence. The
inflammatory disease is especially a periodontal disease or Alzheimer's
colored inflammatory disease, action arthritis, juvenile chronic arthritis, disease, autoimmune diabetes,
insulin-dependent diabetes, diabetic periodontitis, diabetic retinopathy,
costeoarthritis, asthma, cardiovascular disease, autoimmune diabetes,
inflammatory bowel disease, ulcerative colitis, gastric ulcer, hepatic
chiflammatory bowel disease, ulcerative colitis, gastric ulcer, hepatic

The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 15%), which targets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antinflammatory, antiallergic, antiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of disease associated with inflammation, impaired airways, including lung disease and diseases whose secondary effects afflict the lungs of a subject. They can be used for treating c.g. ischaemic conditions, pulmonary vasoconstriction, allergies, asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive currently and cancers such as leukaemias, lymphomas, carcinomas, and cancers which may metastasise to the lungs, including breast and prostate cancer. The A-containing ONs break down with the carcinomas side effects. The A-containing ONs break down with the correspond to SEQ ID NO:1 to 2815, and then the last 185 convention, which correspond to SEQ ID NO:1 to 2815, and then the last 185 convention, which correspond to SEQ ID NO:1 to 185, but the sequences differ invention, which correspond to SEQ ID NO:1 to 185, and then the last 185 convention which their correspond to SEQ ID NO:1 to 185, and then the last 185 sequences given in the disclosure of the present invention. On match the first corresponding SEQ ID NO: sequences given in the sequence of the present invention do not match is the corresponding SEQ ID NO: sequences given in the sequence of the present invention of the present invention.

                                                                                                                                                                                                                                                                                                                     ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention describes low adenosine (A) content antisense oligonuclectides and compositions (1) comprising them. In the antisense oligonuclectides the A is replaced by a 'Universal' or alternative base. (II) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cycostatic activities. The antisense oligonucleotides and (1) can be used to down-regulate the expression and or activity of target polypeptides associated with ungivespiratory disorders and malignancies, such as stimulating and activating peptide factors and transmitters, cranscription factors, immunosuppressive, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adhesion molecules and their receptors, cytokine and chemokine receptors, adenosine receptors, brinding proteins, adenosine receptors, brinding proteins and malignancy associated proteins. The receptors, defensins, growth factors, vasociated proteins. The receptors, binding proteins and malignancy associated proteins and contisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (especially pulmonary obstruction and/or lung inflammation, allergy (ies) and/or undover bronchoconstriction) and/or lung inflammation, allergy (ies) and/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary vasoconstriction, inflammation, allergy conditions, emphysemal, chronic obstructive pulmonary disease (CP), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary infections, bronchitis, pulmonary transplantation rejection, pulmonary infections, bronchitis, and/or enecer. April 4 to AAF1843 represent human polynucleotide in the exemplification of the property of the parenty of the pare
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             antisense oligonucleotides which do not trigger
y metabolism, useful e.g. for treating cancers
